Run Tracker
Run Tracker is a full stack application that to track a user run distances and times.
- The app allows users to create an account, and once signed in, you can log a new run, see all of your runs, and update or delete runs as necessary.
- Users can view stats based upon their logged runs
- The back end was created using Ruby on Rails and the front end utilized HTML, CSS and Javascript, including frameworks Bootstrap and jQuery.

Relevant Experience

General Assembly · Full Stack Web Developer
Completed 1 front end application and 3 full stack applications during a 500+ hour, 12 week immersive program.
